**Starck: a true vanguard.** Following his extensive experience in trendsetting bathroom ceramic design, Philippe Starck is now at home in the kitchen. Together, Starck and Duravit are elevating their successful partnership to include the kitchen with the new Starck K sink. The result: outstanding in the truest sense of the word.

With Starck K, form is reduced to the essentials. The geometry of the right angle pervades as design principle, creating a sleek, simple rectangle with an all-around rim. Adding to this streamlined look are the sink's walls, which rise gracefully from its flat ceramic surface, and an unadorned, groove-less drain board.

Starck K epitomizes formal innovation while offering entirely functional benefits. The sink's generous depth creates myriad advantages, while its dimensions prove compatible with even full-sized mobile catering trays. When placed neatly over the sink, any of the four Starck K wooden cutting boards creates a convenient kitchen station. With sophisticated functionality and elegant modernity, Starck K sets new standards in the kitchen.

**Extra impact-resistant.** Extra robust. Recently, ceramic has become a material of choice for kitchen sinks, especially after having proven its value in the bathroom. And, because even more specific requirements must be met in the kitchen, Duravit has developed its own manufacturing method for its kitchen ceramic to ensure its endurance. Instead of the fine fireclay that is often used for standard kitchen sinks, Duravit employs a special mass to manufacture its ceramic, which results in higher impact resistance. Initial tests confirm the material's high quality, making it ideal for use in the kitchen.

**Apropos ceramics.** Ceramic is extremely hygienic, making it the natural choice for hospital installations, for example. The material is not only robust, but also resistant to temperature extremes, i.e. frozen food can be defrosted or hot saucepans placed in the Starck K sink without hesitation. Additionally, ceramic does not take on odors or flavors: sensitive foods can be placed on the sink just as they can be on a porcelain plate. Even more so, ceramic is impenetrable by light, making it fade resistant to direct sunlight. And – ceramic is sustainable. As a natural raw material, it is non-hazardous during manufacture and is exceptionally durable.

**Easy-care and flexibility.** Starck K's large, yet simple drain board is entirely groove-less. A simple depression between the draining area and sink serves as overflow protection. The slight rounding of the sink's inside corners and rim facilitate cleaning of the easy-care material, making stubborn stains removable with ease. The outlet cover is easy to remove and dishwasher-safe. Starck K kitchen can be combined with many vanity units and almost all modern kitchen fittings.

**Work like a pro.** Outside of its beauty and elegance, the Starck K sink is a true multi-functional powerhouse. Both in private households and the professional restaurant/catering business, Starck K provides the space needed for trays and containers as large as 25" in length. Matching wooden cutting boards are available in four sizes, and in conjunction with the sink's raised edge, they create an optimum comfort working height.

The option without a draining board allows for an even more generously-sized basin, which is spacious enough to accommodate saucepans and even full-sized baking trays.

Starck K 35 3/8"

18 1/2" x 13 3/4"

15" x 13 3/4"

11" x 13 3/4"

7 1/2" x 13 3/4"

The underside of the beechwood cutting boards is strengthened to ensure a sturdy fit.
